UN Launches Gates-Funded Global Digital ID Program as Experts Warn of 'Totalitarian Nightmare'

With support from the Bill & Melinda Gates Foundation, the United Nations this month launched its "50-in-5" campaign to promote and accelerate the development of a global digital public infrastructure. One critic called the campaign "a totalitarian nightmare" designed to "onboard" small countries with "digital ID, digital wallets, digital lawmaking, digital voting and more."

By Michael Nevradakis, Ph.D.

Miss a day, miss a lot. *Subscribe to The Defender's Top News of the Day.* ***It's free.***

With support from the Bill & Melinda Gates Foundation, the United Nations (U.N.) this month launched an "ambitious-country-led campaign" to promote and accelerate the development of a global digital public infrastructure (DPI).

The United Nations Development Programme (UNDP) said its "50-in-5" campaign will spur the construction of "an underlying network of components" that includes "digital payments, ID, and data exchange system," which will serve as "a critical accelerator of the Sustainable Development Goals (SDGs)."

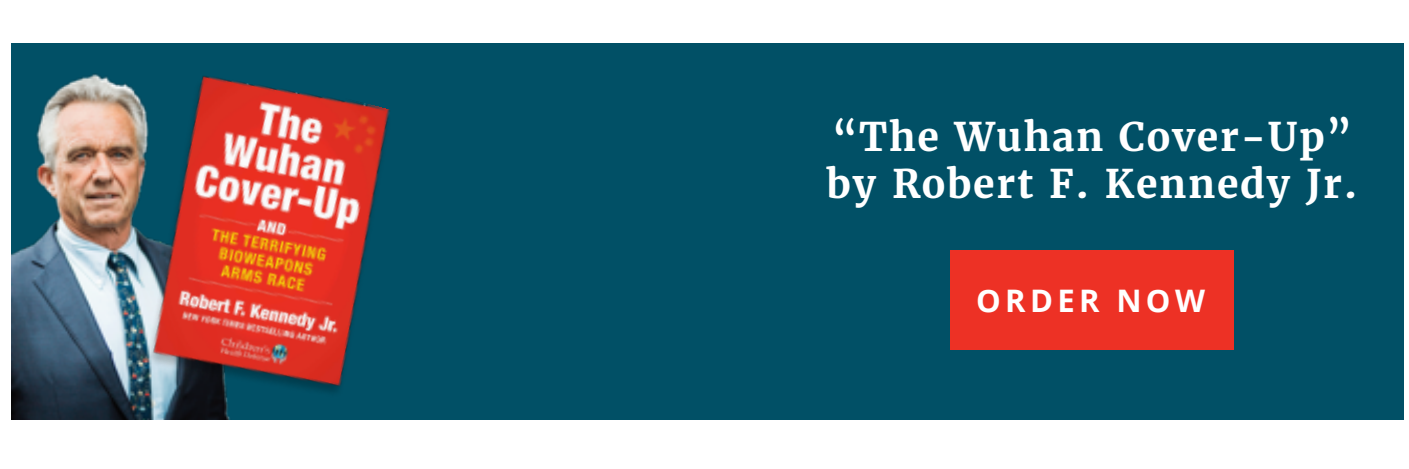
"The goal of the campaign is for 50 countries to have designed, implemented, and scaled at least one DPI component in a safe, inclusive, and interoperable manner in five years," the UNDP stated.

Critics of the campaign include Tim Hinchliffe, editor of The Sociable, who told The Defender he believes DPI "is a mechanism for surveillance and control that combines digital ID, central bank digital currencies [CBDC], vaccine passports and carbon footprint tracking data, paving the way for 15-minute smart cities, future lockdowns and systems of social credit."

The UNDP is leading the "50-in-5" campaign along with the Center for Digital Public Infrastructure, Co-Develop, the Digital Public Goods Alliance. Supporters include GovStack, the Inter-American Development Bank and UNICEF, in addition to the Gates Foundation.

In September 2022, the Gates Foundation allocated $200 million "to expand global Digital Public Infrastructure," as part of a broader plan to fund $1.27 billion in "health and development commitments" toward the goal of achieving the SDGs by 2030.

The Gates Foundation stated at the time that the funding was intended to promote the expansion of "infrastructure that low- and middle-income countries can use to become more resilient to crises such as food shortages, public health threats, and climate change, as well as to aid in pandemic and economic recovery."



"The Wuhan Cover-Up" by Robert F. Kennedy Jr.

ORDER NOW

California-based privacy attorney Greg Glaser described the "50-in-5" campaign as "a totalitarian nightmare" and a "dystopian" initiative targeting small countries "to onboard them with digital ID, digital wallets, digital lawmaking, digital voting and more."

"For political reasons, U.N. types like Gates cannot openly plan 'one world government,' so they use different phrases like 'global partnership' and 'Agenda 2030,'" Glaser told The Defender. "People can add '50-in-5' to that growing list of dystopian phrases."

Another California-based privacy attorney, Richard Jaffe, expressed similar sentiments, telling The Defender the "50-in-5" initiative "point[s] to the much bigger issue of the globalization, centralization and digitalization of the world's personal data."

"My short-term concern is bad actors, and that would be individuals and small groups, as well as state mal-actors, who will now have a big fat new target or tool to threaten the normal operation of less technologically sophisticated countries," he said.

Jaffe said Gates' involvement "scares the hell out of him." Derrick Broze, editor-in-chief of The Conscious Resistance Network, told The Defender that it is "another sign that this renewed push for digital ID infrastructure will not benefit the average person."

"Projects like these only benefit governments who want to track their populations, and corporations who want to study our daily habits and movements to sell us products," Broze said.

Initiatives to promote DPI globally also enjoy the support of the G20. According to The Economist, at September's G20 Summit in New Delhi — held under the slogan "One Earth, One Family, One Future" — India garnered support from the Gates Foundation, UNDP and the World Bank for a plan to develop a global repository of DPI technologies.

'World doesn't need 50-in-5'

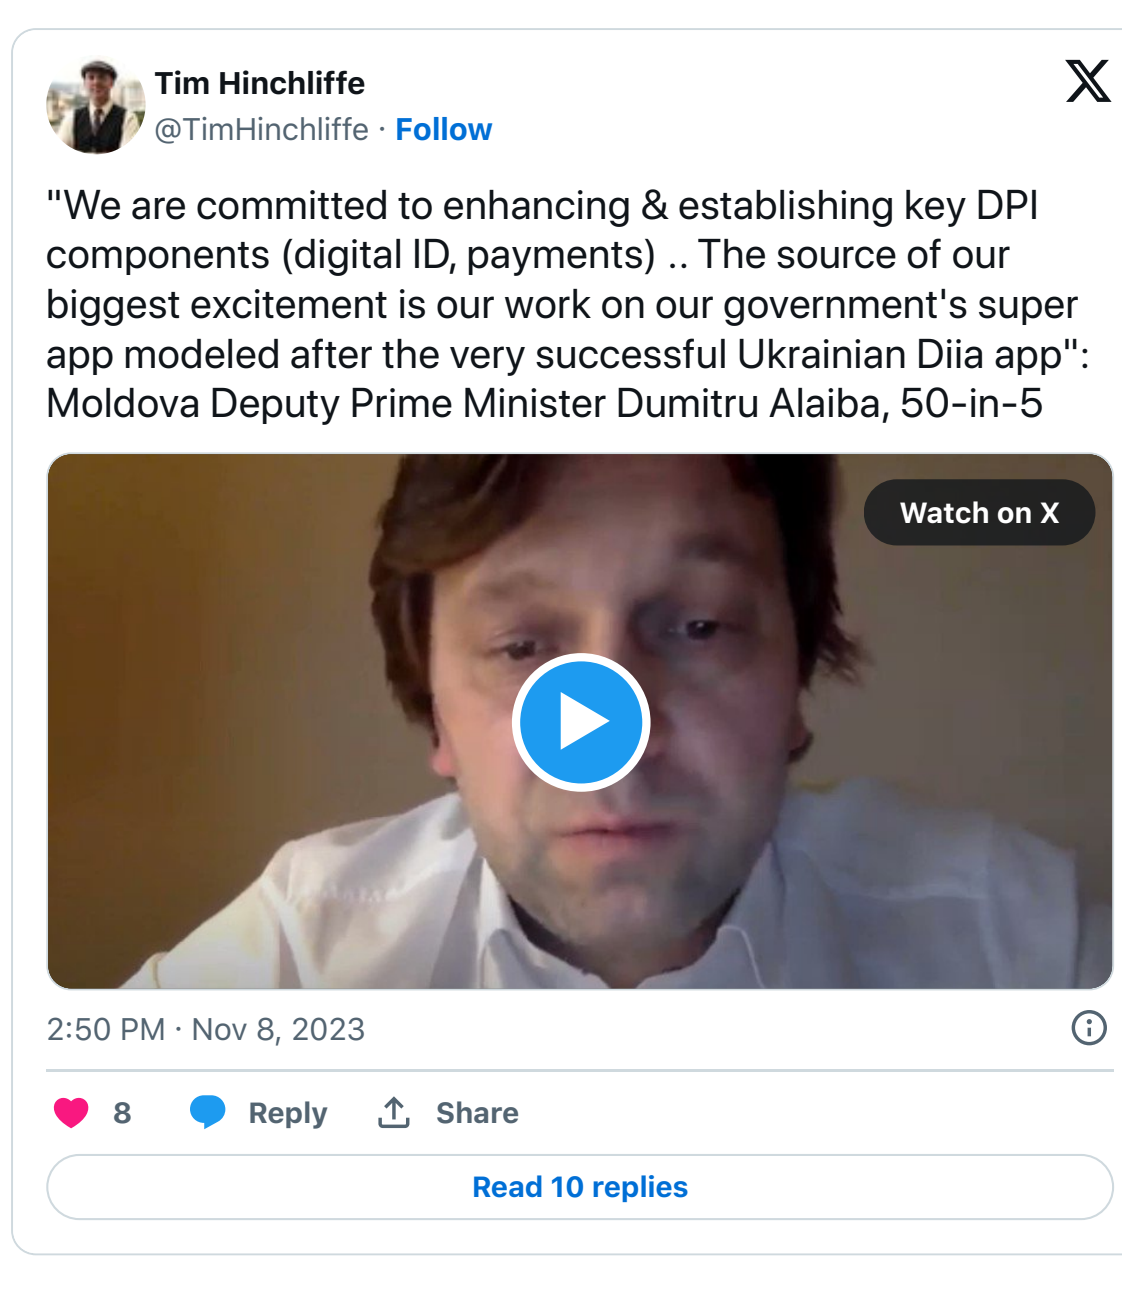
The 11 "First-Mover" countries launching "50-in-5" are Bangladesh, Estonia, Ethiopia, Guatemala, Moldova, Norway, Senegal, Sierra Leone, Singapore, Sri Lanka and Togo.

"Countries, regardless of income level, geography, or where they are in their digital transformation journey, can benefit from being part of 50-in-5," the campaign states, adding that "with steadfast and collective efforts, the world can build a future where digital transformation is not only a vision but a tangible reality."

According to Glaser, the 11 initial countries were chosen not because they are "digital leaders" but because the U.N. sees smaller nations as a "unique threat" because their leaders are occasionally accountable to the people.

"We have seen what happens to leaders of small nations who reject international intelligence agencies' favorite products, such as COVID-19 vaccines, GMOs [genetically modified organisms] and petrodollars," Glaser said. "U.N. programs like '50-in-5' are a way for smaller countries to sell out early to Big Tech and preemptively avoid 'economic hitmen,'" he added.

Speaking at the "50-in-5" launch event, Dumitru Alaiba, Moldova's deputy prime minister and minister of Economic Development and Digitalization said, "The source of our biggest excitement is our work on our government's super app. It's modeled after the very successful Ukrainian Diia app [and] will be launched in the coming few months."



Tim Hinchliffe

"We are committed to enhancing & establishing key DPI components (digital ID, payments) .. The source of our biggest excitement is our work on our government's super app modeled after the very successful Ukrainian Diia app": Moldova Deputy Prime Minister Dumitru Alaiba, 50-in-5

2:50 PM · Nov 8, 2023

At the same event, Cina Lawson, Togo's minister of Digital Economy and Transformation, said, "We created a digital COVID certificate. All of a sudden, the fight against the pandemic became really about using digital tools to be more effective."

According to Hinchliffe, Togo's DPI system had seemingly benign origins, launching as a universal basic income scheme for the country's citizens, "but shortly after that, they expanded the system to implement vaccine passports."

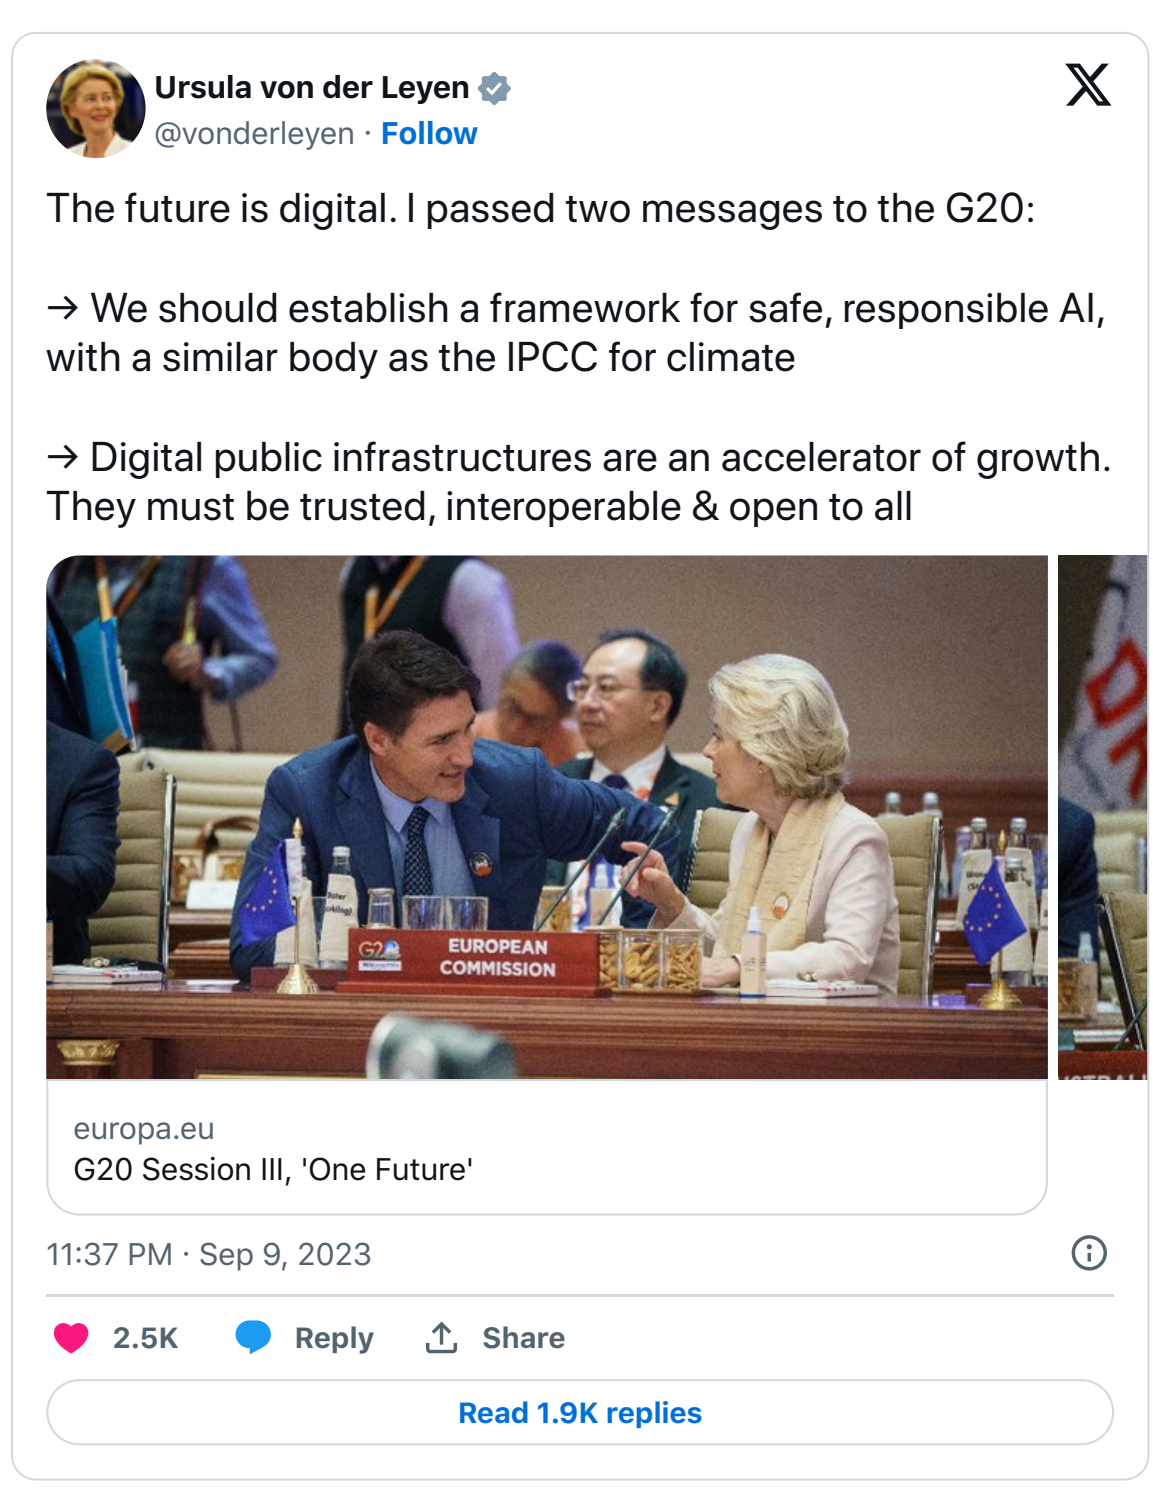
Today, Togo became the first sub-Saharan African country whose digital COVID-19 vaccination certificate is recognized by the @eu_commission. Travelers with a Togolese certificate will be able to validly present it in the EU & vice versa. @AmbUETogo @KoenDoens

5:07 AM · Nov 24, 2021

Togo's vaccine passport was interoperable with the European Union's (EU) digital health certificate. In 2021, the EU was one of the first governmental entities globally to introduce such passports. In June, the World Health Organization (WHO) adopted the EU's digital health certificate standards on a global basis.

Speaking at the G20 Summit in September, European Commission President Ursula von der Leyen said, "The trick is to build public digital infrastructure that is interoperable, open to all and trusted," citing the EU's COVID-19 digital certificate as an example.



Ursula von der Leyen
@vonderleyen · Follow

The future is digital. I passed two messages to the G20:

→ We should establish a framework for safe, responsible AI, with a similar body as the IPCC for climate

→ Digital public infrastructures are an accelerator of growth. They must be trusted, interoperable & open to all

G20 Session III, 'One Future'

11:37 PM · Sep 9, 2023

Four of the "First-Mover" countries are African. Shabnam Palesa Mohamed, executive director of Children's Health Defense (CHD) Africa Chapter, told The Defender the "50-in-5" campaign will be used as a geo-political tool. "Africa is always a prime target because it is comparatively untapped digitally," she said.

"Africa needs respect, food, water and peace," she said. "It does not need DPI."

Along similar lines, Hinchliffe said, "The world doesn't need '50-in-5.' The people never asked for it. It came from the top down. What the people want is for their governments to do their actual jobs — to serve the people."

A 2022 World Economic Forum (WEF) report, "Advancing Digital Agency: The Power of Data Intermediaries," said vaccine passports "serve as a form of digital identity."

In 2020, WEF founder Klaus Schwab said, "What the Fourth Industrial Revolution will lead to is a fusion of our physical, our digital and our biological identities."

Digital ID intended to be 'securely accessed' by government, private stakeholders

According to The Economist, India is heavily promoting its digital ID technologies, first deployed domestically, for global implementation in "poor countries." These technologies have garnered support and funding from Bill Gates and the Gates Foundation.

For instance, Lawson said Togo was issuing biometric digital ID "for all our citizens using MOSIP" — Modular Open Source Identity Platform — a system developed at India's International Institute of Information Technology in Bangalore.

MOSIP, backed by the Gates Foundation, the World Bank and eBay founder Pierre Omidyar, is modeled after Aadhaar, India's national digital ID platform — the largest in the world — which has been beset by controversy.

Launched in 2009, Aadhaar enrolled over 99% of all Indian adults, linking them with many public and private services. But according to The Economist, Aadhaar "suffers security breaches," and though it "was supposed to be optional, it is hard to function without it."

RFK Jr. and Brian Hooker's
New Book: "Vax-Unvax"

ORDER NOW

Glaser said Aadhaar "has been a nightmare for Indians. It is constantly hacked, including, for example the largest personal information hack in world history earlier this month, with personal information sold on the dark web."

"Aadhaar is openly mocked in India," Glaser said. "The only reason it is still used by the citizenry is because people have no practical choice. To participate meaningfully in Indian society, you need the digital ID," he added.

Nevertheless, Gates has praised Aadhaar — describing it on his blog as "a valuable platform for delivering social welfare programs and other government services." In October 2021, the Gates Foundation issued a $350,690 grant for the rollout of India's Ayushman Bharat Digital Mission, a digital health ID system linked with Aadhaar.

A Business 20 (B20) communique issued following this year's G20 summit called on "G20 nations to develop guidelines for unique single digital identification … that can be securely accessed (based on consent) by different government and private stakeholders for identity verification and information access within three years."

In April, Nandan Nilekani, former chair of the Unique Identification Authority of India, told an International Monetary Fund panel on DPI that digital ID, digital bank accounts and smartphones are the "tools of the new world." He added that if this is achieved, "Then, anything can be done. Everything else is built on that."

"The lesson of course for the rest of the world is to never let digital ID take root in your society," Glaser said. "Once a nation's consumer class adopts digital ID with global partners, as in India, it is basically checkmate for that nation."

'When they say inclusive, they really mean exclusive'

According to The Sociable, DPI "promises to bring about financial inclusion, convenience, improved healthcare, and green progress."

According to the "50-in-5" campaign, DPI "is essential for participation in markets and society in a digital era [and] is needed for all countries to build resilient and innovative economies, and for the well-being of people."

But Hinchliffe refuted that assertion. "You don't need digital ID and digital governance to provide better services to more people," he said. "The tools are already available. It's about incentives. Businesses, governments, and private citizens all have the power to come up with better solutions now, but why don't we?"

Still, "inclusivity" is one of the key narratives employed to promote DPI. The "50-in-5" campaign states, "Countries building safe and inclusive DPI … can foster strong economies and equitable societies" and that DPI "promotes innovation, bolsters local entrepreneurship, and ensures access to services and opportunities for underserved groups, including women and youth."

Experts who spoke with The Defender warned DPI has the potential to be exclusionary.

"While the United Nations, the Gates Foundation and Rockefeller Foundation promote DPI as necessary for an 'equitable' world, the reality is that these tools have the potential for furthering exclusion of political activists, whistleblowers, and other individuals who hold controversial opinions," Broze said.

Similarly, CHD Africa's Mohamed claimed, "People, groups and organizations that pose a threat to the establishment will be targeted for digital surveillance and socio-economic isolation" via DPI. "This … is an easier way to control critical thinkers."

Hinchliffe said DPI will "accelerate technocratic control through digital ID, CBDC and massive data sharing, paving the way for an interoperable system of social credit."

Similarly, Glaser said, "With DPI, the U.N.'s plan is to issue everyone a social credit score in line with U.N. SDGs (Agenda 2030) … Your digital ID will become the new you. And from the perspective of governments and corporations, your digital ID will be more real than your flesh … required in various measures to travel, work, buy/sell, and vote."

"When they say inclusive, they really mean exclusive, because the system is set up to exclude people who don't go along with unelected globalist policies," Hinchliffe said. "What they really want is for everybody to be under their digital control."

Notably, a June 2023 WEF report titled "Reimagining Digital ID" concedes that "Digital ID may weaken democracy and civil society" and that the "greatest risks arising from digital ID are exclusion, marginalization and oppression."

Making ID — digital or otherwise — mandatory may exacerbate "fundamental social, political and economic challenges as conditional access of any kind always creates the possibility of discrimination and exclusion," the report adds.

Experts who spoke with The Defender said people must be given the choice to opt out.

"If the U.N. and its member states push the digital ID agenda, they must ensure that their respective populations have a simple way to opt out without being punished or denied services," Bronze said. "Otherwise, the digital ID creep will eventually become mandatory to exist in society and we will see the end of privacy, and, in the long-term, liberty," Broze said.

Jaffe said that while he does not oppose digital payment systems, he "would be vehemently opposed to the elimination of non-digital payment, like fiat paper currency," calling this an issue of "freedom and privacy."

Similarly, Hinchliffe said, "There should be non-digital alternatives available at all times and this should be a right of every citizen. Systems can fail. Databases can be breached. Governments can become tyrannical. Corporations can become greedy."

'The endgame is sovereignty by transhumanists'

Many of the initiatives that are backing "50-in-5" are themselves interlinked — in addition to their connections to entities such as the Gates Foundation.

For instance, the Omidyar Network, one of the supporters of "50-in-5," has provided funding to MOSIP — as has the Gates Foundation.

The Gates Foundation, the Rockefeller Foundation, the UNDP and UNICEF participate in the Digital Public Good Alliance's "roadmap" of entities that "strengthen the DPG [digital public goods] ecosystem."

Earlier this year, Co-Develop invested in the establishment of the Center for Digital Public Infrastructure, which is headquartered at the International Institute of Information Technology in Bangalore, and is also home to MOSIP. Co-Develop was co-founded by the Rockefeller Foundation, along with the Gates Foundation and the Omidyar Network.

And "endorsing organizations" of the World Bank's "Principles on Identification for Sustainable Development" report include the Gates Foundation, the Omidyar Network, UNDP, Mastercard, ID2020 and the Tony Blair Institute for Global Change.

Glaser said that Gates attained wealth by "monopolizing his operating system into every home and business worldwide" and "is doing the same now at the U.N. level with vaccines and DPI applications."

"DPI platforms essentially outsource sovereignty to international governing bodies that do the bidding of financial entities like Vanguard, BlackRock and State Street," he said.

"Companies with that much information on citizens hold enormous power to sabotage infrastructure [with] very few ethics to stop them," Mohamed said.

"The endgame is sovereignty by transhumanists," Glaser added. "The reason digital ID is an existential threat to society is because it separates people from their local governments, who have always worked cooperatively to prevent tyranny."

"DPI is being sold to authorities on the grounds that it will include them in the worldwide economy, when in reality it will commodify their people and remove the ability of local authorities to ever govern meaningfully again," he said.

Hinchliffe also connected DPI to policies that purport to combat climate change.

"With G20 nations committing to net-zero carbon emissions policies by around 2050 … restrictions will be placed on what we can consume, what we can purchase, and where we can go thanks to the widespread implementation of digital ID and CBDC to track, trace, and control our every move in … 15-minute smart cities," he said.

"They openly talk about using DPI for 'digital health certificates' … and I believe that next will come carbon footprint tracking to monitor and control how you travel and what you consume," Hinchliffe added, calling it "a future of constant surveillance and control."

"If we can legislate and litigate to retain the right to traditional identification, then this categorically protects all of our rights," Glaser added. "As long as the consumer classes of large nations like the United States resist digital ID, there is hope."

"These schemes do little to nothing for the prosperity of the majority of Africans, but rather, they further the interests of a small economic and political class," Mohamed said. "With growing economic disparity and anger, the attempt to waste more African resources on digital ID may lead to widespread revolt."

"Generally, once Africans know what Bill Gates is about, they refuse to get involved in or support his activities," she added.

The world is catching on to Gates... He's made himself the posterchild for suffering and death, and at some point those actions will maneuver him into an extremely precarious position with his own people, the courts, and the general population... Personally, I look forward to that time.

We shouldn't fall into the trap of believing that Gates, the individual, is the root of the evil being planned and perpetrated. He, like Schwab and Trump, are used like PR men and ultimately set up as heels, as in professional wrestling, for the collective, global ruling class agenda. They are used to personify the evil and absorb the attention and hate of the masses so that they're distracted from the systemic causes as well as the globally coordinated nature of the conspiracy and class war. And ultimately they can be scapegoated or sacrificed in the spectacle to fool people into thinking that, if/because these individuals are out of the picture, everything is fine.

Tom Bernard → Joopy
42 minutes ago

I certainly don't think Gates is 'The Man,' or the embodiment of all evil... I was simply implying Gates, like Humpty Dumpty, will eventually fall, and I won't lose any sleep over it... If you want to dig deeper, I image the discussion would eventually lead to God's Sovereignty... Personally, I don't believe everything 'will be fine' until God's plan is complete; because Gates, like Nebuchadnezzar before him, is actually an instrument of God's to teach us by: (Assuming their is truth within the Biblical Word...)

It's also amazing how many services out there have no options for customers who don't have a cell phone. You pretty much need some way to receive text messages now, though thankfully that can usually be worked around with services like Google Voice (though if I could find a similar option from a better company I would, but it's less terrible and costly than a smartphone). But some companies refuse to accept those phone numbers and pretty much give a clear indication that they don't want customers who don't have cell phones, preferably smartphones.

That doesn't even get me started on the concerns of having so much security verification related things tied to a device that can be so easily lost, stolen, or damaged beyond repair. I've done cell phone support for years and lost/stolen or badly damaged phones were the most common reason for people to call in and to be honest, it seems people lose access to their phones far more in their lifetimes than they lose access to physical ids.

I have been saying that for a long time. In fact, I wrote a poem about it:

Cell Phone

Your cell phone is your ball and chain,
the vampire that will drain your brain;
the tool that's turned you to a slave
no matter what you may believe.

And now the government knows all,
and Google copies every call,
and Apple multiplies your fame,
and even Yahoo knows your name.

You may decide it doesn't matter
and still continue online chatter,
and tighten thus around your neck
a collar you may never break.

And so, you have become enslaved,
a servant of the drug you craved;
you helped them lead you by the nose
in bondage that the whole world knows.

The Grand Inquisitor has said
that humans gave up all for bread;
they'd rather cell phones than be free,
which may suffice for you but not for me

Does it bother anyone else to read "the U.N. sees smaller nations as a "unique threat:" because their leaders are occasionally accountable to the people." Silly me; I thought leaders were supposed to be accountable to their people. Looks like the global elites have a different idea about loyalty. Expletive them.

Nov 2, 2023 Bill Gates' SHOCKING Population Control Plans

In today's video, we're diving into some big questions about Bill Gates. Some people are saying he's trying to control the number of people in the world. They're talking about a "death panel" idea and how much money he's put into vaccines and health care for women. We look at times when Gates said things that make it seem like he wants fewer people on the planet. What's he really up to? We also check out what's happening in Canada with people choosing to end their lives with help from doctors, and how groups like the World Economic Forum might be involved. Our video is all about guessing what Bill Gates might do next and why it's a big deal if one person gets to make huge decisions for everyone.

Aimed at "Low income" countries…? Why not say Africa, who don't like Bill Gates anyway….!
To deal with Food Shortage, Public Health Threats,Climate Change, Economic Recovery….?
All Created by Rich Northern Hemisphere Countries in the First place.
They let the Cat out the Bag with Including Singapore, in the First 11 counties to be "Attacked".
Small Countries need to be Ruled by "Them"…. Not a Sovereign Right.?
Who enjoy "Self Determination".
They want to stop Sovereign countries refusing their "Favourite Products"……
A name for Poisoned Vaxxines.!
This is supported by WEF, G20, Gates, who want to Control "Critical Thinkers"..?
They say countries should have these "Inclusive Entities" (Digital Identification)?
When infact, once Vanguard, Black Rock, State Street, have All your info, from Birth to your Early Grave.!
Then you will become an "Excluded Entity" if you don't Comply.
This is a growing Cancerous Take Over ,by the Tyrannical Global Elitists.
Just Don't do it. say No now.
